

News from Chrosziel: HDSLR Accessories and the Conversion to Carbon Design

1. LightWeight Support for Canon EOS 7D with PL-mount

Chrosziel's new LightWeight Support 401-425 is now available for the modified Canon EOS 7D with PL-mount by FGV. The Support comes with a thread insert for the camera's 3/8" thread, and the Chrosziel Mini Wedge Plate (401-140). The wedge plate secures the Support onto the Chrosziel Bridgeplate with QuickLock, or onto the ARRI DigiCine Baseplate. This system allows for both 15mm and 19mm support rods.

The LightWeight Support 401-425 comes equipped with 15 mm rods that slide under the camera. It is based on Chrosziel's 401-400 series and owners of these existing supports can upgrade with a low-cost upgrade kit (401-425P, RRP €92).

LightWeight Support DSLR PL complete, Art. No. 401-425, RRP €339.

2. LightWeight Support XXL for HDSLR Cameras

Chrosziel's LightWeight Support 401-93 is designed for cameras with large bodies. The support accommodates the Canon EOS 1D Mark IV, EOS 5D Mark II with battery grip, and Nikon D3s. RRP €299.

3. New and Improved HDSLR Lens Supports

DSLR tele lenses often come with their own tripod mount and thus support the camera. Chrosziel's new and extremely low **Lens Support Telephoto 401-34** utilizes this mount. Lenses with tripod mounts are safely supported for rod/mount distances between 4 and 11 mm. A ¼" screw locks the mount to the support from inside.

RRP €322.

The existing lens **Support Photo Universal (401-33)** will from now on be equipped with a modified elevating screw. One end is covered by a plastic cap as before (see below);

the other, however, is equipped with a 5 mm adapter that, when required, engages the tripod mount thread by turning the screw (or the whole Support). This provides relief for the camera's lens mount and prevents the lens from moving laterally, especially for lenses with mechanical end stops.

4. New Carbon Design for Impact-Resistant Housings

At NAB Chrosziel introduced for the first time their MatteBox 456 Academy with impact-resistant polystyrene housing in Carbon Design. Meanwhile, production of most MatteBoxes and SunShades has been switched over as well. The high-volume models such as MatteBox 450 for 1/3" chip cameras and SunShade 412 for 2/3" cameras, as well as MatteBox 415, Chrosziel will now only deliver in Carbon Design (CD-version). Prices will remain unchanged.
