

Operating Quick Guide CDA-EIC-HR12

External Iris Controller for Fujinon Box Lenses

Product number: CDA-EIC-HR12

Version 1.0

Local Iris control for Fujinon Box Lenses (CDA-EIC-HR12).

- Easy installation with included articulating arm to any standard 1/4" or 3/8" thread (i.e. center thread of existing rosettes)
- The dampened and handy dial knob gives the camera operator smooth and accurate local Iris control.
- The CNC -milled compact, robust, and sealed housing is designed for daily work on set.
- For flexible mounting, housing contains several 1/4" and 3/8" threads according industry's standard.
- Dual color LED indicator gives quick status information to the operator about "ready" and "active" state.
- Easy to access toggle switch activates/ deactivates the local Iris control.
- Coiled cable allows for flexible mounting around the set-up.
- Two small high-resolution potentiometers (hidden behind two rubber caps) allow a precise calibration of the dial knob.
- The Iris Controller connects using a single cable with a 12-pin Hirose connector to the dedicated range selector control socket on the box-lens.
